Thinking About Oral Healthcare

An increasing number of Americans understand the link between oral health and overall health, especially as they get older ...

93% older adults ages 50+ want dental coverage included in Medicare. Compared to other coverage types—vision, hearing, long-term care and foot care—dental care was the top priority.

WHY THEY FAVOR A DENTAL BENEFIT

- We all need care
- Oral health impacts total health
- Coverage prevents costly issues
- Self-confidence

BUT ...

4 in 10 participants feel they will likely NOT have any coverage

CONCLUSION

Older adults ages 50+ agree on the need for coverage and demonstrate a sophisticated understanding of the trade-offs involved in this debate. Many older adults are well-informed on this issue because their own health, their own care and their own finances are directly impacted.

oralhealthamerica.org

When asked about coverage, older adults’ opinions varied –

93% of older adults 50+ say the current Medicare system is inadequate and would like to see change

AS A RESULT

COST IS THE PRIMARY CONCERN

48% believe they should be receiving the highest level of treatment when issues arise because they have paid into the system for so many years

52% understand Medicare is a government program covering a large number of people – which means treatments must be cost-effective.

When it comes to coverage, older adults recognize trade-offs in order to achieve advantages in other areas, but:

FAVOR: choice of provider

DISFAVOR: annual limits, limited benefits (preventive only)

"I want to be pain-free. And that means getting my regular exam and cleaning and then dealing with my crowns.”

– Female, Chicago
