Nationally: FY 2016: 50.0%
Percentages of children receiving services (15-18 years old)

Texas Medicaid

- Percentage of children receiving any dental service who had preventive services went from 83.2% in 2012 to 95.6% in 2016
- Percentage of children receiving any dental service who had dental treatment went from 73.3% in 2012 to 57.5% in 2016
- Percentage of children receiving any dental service maintained around 63%
**Summary**

**Texas Medicaid**

- Program has increased along with overall Texas population
- Children who have oral health services in the medical home have a high probability of seeing a dentist that year
- For children of older ages – preventive services have increased and treatment services have decreased
- Managed care has potentially had an impact on dental treatment/dental care
