

Building Healthy Communities Together

**2017 TEXAS
ORAL HEALTH
SUMMIT**

November 9-11, 2017

Omni San Antonio Hotel at the Colonnade

9821 Colonnade Blvd.

San Antonio, Texas 78230

November 9, 2017

Dear Conference Attendees:

On behalf of the Texas Oral Health Coalition, Inc., (TxOHC), welcome to the 2017 Oral Health Summit. We are pleased to offer a variety of educational sessions, expert speakers and many networking opportunities during this two and a half day conference.

This year's theme is **Building Healthy Communities Together** and it is our belief that an emphasis on inter-professional education, collaboration, and programming will achieve better health for Texas citizens throughout their life spans. Recognizing and welcoming the many resources in our communities which can be utilized to improve health outcomes is our mission for this summit. Working together to craft multidisciplinary teams and projects in our communities is the first step to assuring comprehensive care for our citizens and incorporating oral health as an essential part of overall health.

Most importantly, disease prevention via community-based prevention services, like water fluoridation and dental sealants, with consensus among members of the healthcare team to provide health education, medical/dental assessments and timely referrals is essential to improving the public's health.

"Oral Health: State of the State" is the featured plenary on Friday. Thursday and Saturday, attendees may attend specially designed symposia and a variety of continuing education sessions that focus on interdisciplinary collaboration, maternal/child oral health issues, adult or elderly oral health care, and school-based issues programs in a stimulating and informative forum.

Attendees will have the opportunity to learn what oral health programs exist across Texas, how they operate and how increased inter-professional collaboration can have a collective impact to improve the oral health for all Texans.

"The health care we want to provide for the people we serve—safe, high-quality, accessible, person-centered—must be a team effort. No single health profession can achieve this goal alone. These new competencies will build a path to a collaborative health care workforce and the improved care that we all desire."

Carol A. Aschenbrener, M.D.
Executive Vice President
Association of American Medical Colleges

As 2017 comes to a close, I am excited to continue my role as Chairperson for the Coalition. It is an honor and privilege to represent you at the state and national level and I thank you all for your support. I ask for your continued support for the upcoming year as we tackle issues such as water fluoridation and funding for oral health programs. I am indebted to the Board of Directors who serve with me as we work to strengthen our core infrastructure to build a solid foundation while remaining verdant in our outreach and advocacy efforts.

I ask that you each strive to become oral health champions and carry that message back to your community. Weave a network of local champions and build consensus with your advocacy as you collaborate with local and state partners.

Thank you for attending the oral health summit and joining our network of health advocates. We look forward to a continuation of productive partnerships and forming new alliances as we expand our network to achieve Healthy Communities.

Sincerely,

Sherdeana Owens, DDS, MPA.

Chairperson, Texas Oral Health Coalition, Inc.

CE Evaluation & Attendance Verification

To receive Course Attendance Verification for continuing education you are required to use your assigned registration number that may be found on your name badge and/or electronic registration confirmation to complete the online Summit and Course Evaluations. Please refer to the separate blue instruction sheet provided in your registration packet, or go to www.txohc.org for details.

You have until December 15, 2017 to complete your evaluations for credit.

Mission Statement

It shall be the mission of the Texas Oral Health Coalition to promote oral health across the lifespan by advocating for optimal oral health for all Texans through statewide partnerships.

Vision Statement

We envision Texas as a state where every person is known to enjoy optimal oral health as part of his/her total well-being through Individual and shared community responsibility where:

- Education and prevention are priorities;
- Education, prevention and treatment are available, accessible, affordable, timely, and culturally appropriate;
- Community solutions are shared among patients, parents, providers, employers, insurers, and government; and
- Collaboration with government, higher education, public and private sector ensures resources, supportive public policy, quality care, advocacy, and patient education.

Strategies

1. To increase oral health literacy in Texas.
2. To change perceptions regarding oral health and disease so that oral health becomes an integral component of health policies and programs in Texas.
3. To engage in activities to improve the oral health of all Texas citizens using evidence-based public health initiatives.
4. To promote increased access to comprehensive oral health care for all Texans.

SPECIAL THANKS TO THE FOLLOWING:

Midwest Dental Equipment and Supply
Tote bags for Summit attendees

Philips Sonicare

Kids toothbrush with coaching app and a FlexCare Platinum Connected toothbrush for door prizes.

Goal 1 Eradicate dental disease in children.

With the closing of disparity gaps, 85% of children reach age 5 without a cavity

Goal 2 Incorporate oral health into the primary education system.

The 10 largest school districts have incorporated oral health into their systems

Goal 3 Include an adult dental benefit in publicly funded health coverage.

- *At least 30 states have an extensive Medicaid adult dental benefit.*
- *Medicare includes an extensive dental benefit.*

Goal 4 Build a comprehensive national oral health measurement system

A national and state-based oral health measurement system is in place

Goal 5 Integrate oral health into person-centered healthcare.

Oral health is integrating into at least 50% of emerging person-centered care models.

Goal 6 Improve the public perception of the value of oral health to overall health.

Oral health is increasingly included in health dialogue and public policy.

ADVANCING THE ORAL HEALTH MOVEMENT IN TEXAS

“Oral Health is a reflection of the physiological, psychological, and social factors that are essential to our quality of life”. Learn more about the impact of poor oral health on our lives and join our efforts to make oral health an integral part of overall health and well-being.

We thank our national advisors, all stakeholders, our partners at the Texas Oral Health Coalition and the DentaQuest Foundation for their support and participation in this shared initiative.

Continuing Education Courses

A completion code will be announced during each course. This code must be used to verify your course attendance when you complete your online evaluations to receive your Education Certificate.

Full course descriptions, including learning objectives and speaker biographies may be found online at www.txohc.org.

The blue instruction sheet in your registration packet will provide details for completing course evaluations to prove attendance and furnish CE verification.

1:00 PM

Oral Health Integration Symposium

**EFG
Ballroom**

The oral health landscape is continually changing in Texas. In the face of this change, we can either be reactive, or proactive. Attendees will learn to translate collaborations into action through rigorous, collaborative, and a data-driven approach to systems change.

4.0 CEU

Participants will learn about successful interprofessional oral health education modules and how to integrate oral health education into academia and medical and dental care.

The symposium will provide collaborative preventive strategies for caregivers and health professionals to use to improve oral health for individuals with dementia, developmental and intellectual disabilities and complex medical needs.

Attendees will learn best practices and successful strategies to address data collection, diverse financing mechanisms, and increasing collaborations with community partners to develop or sustain school-based health programs.

EFG
Ballroom

During this six-hour symposium presenters will discuss recent actions and activities of the federal government related to health funding, programs, appointments, and national health reform activity. The focus will be on how these changes impact oral health in Texas. Representatives from the Health and Human Services Texas Medicaid Dental Program and the Department of State Health Services Oral Health Program will review current policies and provide an overview of dental services and program activities.

6.0 CEU

A framework for moving forward in light of emerging regulatory trends and changes on the nursing home “front” will be given. Attendees will learn about progress made toward implementing electronic health records, including an assessment of the impact of this program on oral health measures.

Attendees will learn strategies to empower communities, practitioners and stakeholders in order to drive action and develop policy for improving daily oral hygiene for Texas nursing home residents, individuals with disabilities and pregnant women.

Minimally Invasive Dentistry Symposium

EFG
Ballroom

The symposium will include a discussion of innovative approaches utilizing social marketing campaigns to influence behavior change in targeted populations, such as Tribal populations, seniors and children.

The use of Silver Diamine Fluoride (SDF) and its protocols will be discussed as it relates to the treatment of children, adolescents and adults with special needs.

A paradigm shift in dentistry requires courage to challenge ingrained practice behaviors and make prevention and the use of minimally invasive products a part of the armamentarium to treat incipient lesions and manage chronic disease. Panel participants will discuss the use of new products and tools, treatment options specific to their area of practice, ethics, and reimbursement challenges during this interactive case study exercise.

3.0 CEU

MCNA is a premier dental benefits administrator that provides exceptional service to state agencies and managed care organizations for Medicaid, CHIP, and Medicare members. We also offer commercial dental plans for private employers, individuals, and families.

2017 Poster Presentations

Thursday, November 9—Saturday, November 11, 2017

Poster Presentations will be available throughout the Summit

Participants must combine Completion Codes in order to receive 1.0 CEU on the online poster presentation evaluation.

Interprofessional Education: Oral Health Education in the Nursing Simulation Lab

Christina Murphey, RN, PhD and Sherdeana Owens, DDS, MPA

Completion Code: _____

The goal of this program is to expand the involvement of all health care professionals in oral health care. Interprofessional education (IPE) and training is important for a work-ready collaborative practice team. Understanding the role of the allied health professional and participating in shared activities around oral health are important aspects of IPE allowing nurses and allied health professionals to contribute to team-based care and further the goal of incorporating oral health care into overall care.

ROHDEO: How Texas Created the Repository of Oral Health Data for Evaluation and Outcomes

Annaliese Cothron, MS

Completion Code: _____

Since 2014, Texas has been developing The Repository of Oral Health Data for Evaluation and Outcomes (ROHDEO) as an electronic, publicly available database of oral health indicators to include Basic Screening Survey (BSS) clinical data, access to oral health care information, and basic demographics. Community oral health programs collecting oral health data on children and adults across Texas voluntarily contribute data to ROHDEO annually. Data is submitted via an online portal. Data are summarized and released onto the public repository website, www.rohdeo.org. Numbers and percentages of clinical, oral health care access, and demographic data are summed and reported by county and age group. ROHDEO data can be used to identify oral health disparities, evaluate emerging oral health trends, influence policy change, target unmet need, and compare data on the local, regional, state, and national levels. Future expansions of ROHDEO include interactive mapping tools and integrated portals to existing oral health data like Medicaid, community water fluoridation, and dental workforce distribution.

Texas Perinatal Oral Health Program

Sherdeana Owens, DDS, MPA

Completion Code: _____

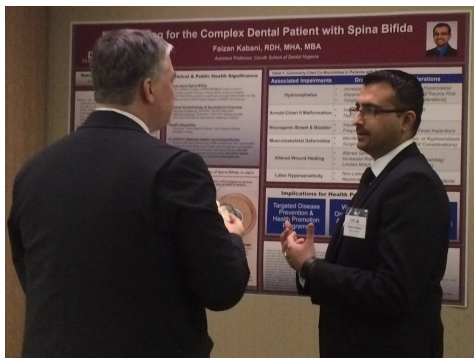

The goal of this program is to provide oral health education for perinatal women and caregivers. Researchers state that although knowledge can be improved by education and attitudes can be changed as a result, behavior is more complex, therefore, more challenging to modify. This project uses oral health messages printed on baby clothing to repeatedly reinforce three specific oral health behaviors: a healthy oral health diet, dental attendance, and oral hygiene.

Measure of Parental Perceptions and Oral Health Behaviors

Annaliese Cothron, MS

Completion Code: _____

Miles of Smiles (MOS), a school based oral health promotion program sponsored by UTHSCSA, seeks to treat kindergarten-3rd grade students for free at their elementary schools in an effort to promote oral health awareness and reduce child hood cavities. Using telephone survey methods, evaluators contacted parents and asked questions about the program, MOS objectives, and access to routine dental services. The responses were then matched to the child's MOS clinical record. The majority of the population sampled was insured by Medicaid, and 20% of them in the population had untreated decay, which translates into a proportionately high regional incidence. Most parents rated their child's oral health worse than their general health. 50% of children consumed two or more drinks a day, which exceeds the AAPD recommended amount. Surprisingly, sugary drink consumption did not have an effect on decay status.

Poster Presentations Continued

2017 Poster Presentations Continued

Assessment of the Knowledge, Attitudes and Implementation of Tobacco Smoking Cessation Interventions among UTSD Dental and Dental Hygiene students

Victoria Patrounova, RDH, MHA

Completion Code: _____

The goal of our study was to evaluate the effectiveness of UTSD curriculum content on tobacco dependence education among fourth year dental and second year dental hygiene students respectively.

A total of two anonymous online surveys were administered, before and after the introduction of an interactive, self-paced, video-based educational online tool. They were used to evaluate students' knowledge, attitudes and implementation of tobacco smoking cessation interventions.

The right to remain caries free: Arresting Decay with Silver Diamine Fluoride.

Victoria Patrounova, RDH, MHA

Completion Code: _____

Silver diamine fluoride (SDF) is a non-invasive preventative product that arrests decay. It will have the biggest impact on those with extreme caries risk, rampant caries, and those without access to care, such as the elderly and poor. The poster was created to raise awareness and educate dental professionals on incorporating SDF as a treatment plan option, especially in areas where there is low access of care and financial support is limited.
